

A low-angle, upward-looking shot of a modern interior. The ceiling is white and features several large, rectangular skylights with light-colored wooden frames. Sunlight streams through the skylights, creating bright, diagonal bands of light across the ceiling and walls. In the lower right foreground, a portion of a white, plush sofa is visible. The overall atmosphere is bright, airy, and contemporary.

# WE CHANGE THE VIEW

## TAKING FROM

this experience we create a better, more perfect future. When designing our products, we take into account the values that shape our lives. Setting the highest standards we try to mobilise others. Changing the point of view we introduce innovations that help make life more comfortable. With our quality products, life gains an edge.

## WE CARE ABOUT NATURE

One of the major objectives to be taken into account when designing products is their impact on nature. For this reason, the FAKRO products are extremely energy efficient and safe, whilst also contributing to the conservation of exhaustible natural

resources of the Earth. Our environmental responsibility is not only the acquisition of raw materials, mainly wood acquired from well-managed forests which is used in the production of natural, organic products but rational waste management as well.

# WHAT DISTINGUISHES US

## MAINTENANCE FREE VENTILATION

**Always fresh air in the loft space.**

Given the tightness of joinery used in modern construction, problems seem to arise with proper ventilation, which in turn can cause condensation in the room. In order to reduce this phenomenon, FAKRO windows use a number of different air inlets:

### V40P

V40P automatic air inlet with a capacity of 52m<sup>3</sup>/h (value without filter in the profile, with filter at 40m<sup>3</sup>/h) at a pressure difference 10Pa depending upon window width.

By automatically adjusting the volume of flow channel, the air inlet secures the optimum amount of air into the room providing a healthy climate in the attic and saving heat and energy cost.

### V35

Efficient air inlet V35 – has a manual adjustment of air flow. When fully opened the air inlet provides fresh air up to 43m<sup>3</sup>/h (without filter in the profile, with filter up to 35m<sup>3</sup>/h) at a pressure difference of 10 Pa, depending on the width of the window. With increased efficiency, indoor air humidity is reduced effectively, and thus the condensation effect is limited.

### V10

Air inlet V10 – has a manual adjustment of air flow. When fully opened this inlet provides fresh air up to 9m<sup>3</sup>/h at a pressure difference of 10Pa. V10 air inlet should be used only in areas where unassisted gravitational ventilation works well.

## INCREASED SECURITY

**In your home you want to feel safe.**

The glass in the roof windows must withstand hail storm or accidental fall of tree branches. FAKRO windows glazing units are perfect protection against this potential threat as they are equipped with exterior toughened glass.

It is also important that the roof windows special design will protect against an accidental opening while stepping on the sash. Such solutions also significantly increase windows' resistance against burglary. Most of the roof windows have a

special FAKRO re-inforcement system TopSafe, consisting of:

- ① innovative installation system of specially shaped hinges,
- ② metal element strengthening the locking system,

- ③ metal slat, making it difficult to break the window open with the help of tools.

## AMPLE NATURAL LIGHT

**Natural light is beneficial.**

Design of FAKRO roof windows provides appropriate illumination of room within the loft space. Specially shaped profiles of the frame and sash as well as air inlet location in the upper part of the frame allows for the influx of high amount of natural light.

Another important issue is the installation height of the window. Placing the handle in the bottom of the sash ensures correct roof window installation according to DIN, which indicates a minimum height of 220cm above the floor for the upper edge of the glazing. With such installation the handle is always within the reach. Higher installation of win-

dows means that even tall people can comfortably stand at the open window. This higher installation height also ensures that it complies with building regulations and provides free, unobstructed views to the outside.

## HIGH ENERGY SAVINGS

**Heating does not have to be expensive.**

In winter, energy-efficient roof windows reduce energy consumption. Roof window means not only light but also passive acquisition of heat in

winter and its retention inside the room, thanks to an energy-efficient structure. FTT Thermo U8 window with  $U_w = 0.58 \text{ W/m}^2\text{K}$ ,

delivered and installed with EHV-AT Thermo flashing is the most efficient window on the market.

**topSafe SYSTEM**

FAKRO roof windows are the only ones on the market which received the German TÜV.

**10 year warranty**  
for window

**20 year warranty**  
for glazing unit

**∞ Lifetime**  
glazing unit hail  
resistance warranty

We are sure of the **QUALITY** that's why we offer a long-term guarantee

## → WINDOW DESIGN

The basic raw material for the manufacture of windows is highest quality pine wood, glued in layers. The wood is vacuum-impregnated and painted with ecological acrylic lacquer in natural colour.

For rooms with periodically elevated humidity levels (kitchens, bathrooms), there are wooden windows with three coats of polyurethane varnish ideal for creating a durable and smooth finish in white on the surface of the frame.

The windows may also have aluminium-plastic structure. Multi-chamber PVC profiles in white are re-inforced with steel cores. Material does not absorb moisture, the window is durable and resistant to corrosion. The windows are also available in golden oak or pine-coloured veneer. Designed for rooms where elevated humidity level stays for longer period (bathrooms, laundry rooms). FAKRO PVC profiles are in Class A - the highest, made according to European standard EN 12608.

## → ROOF WINDOWS

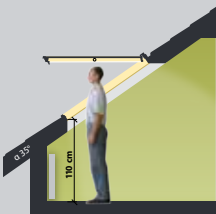

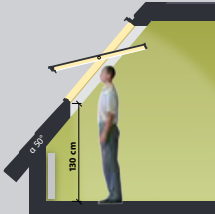

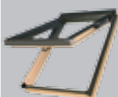

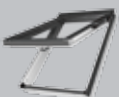

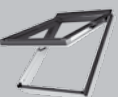

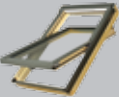

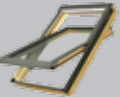

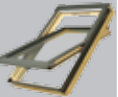

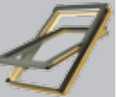

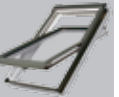

are the optimal solution used in modern construction. Roof windows illuminate the room interior, provide a view to the outside and allow ventilation of the attic.

Depending on the type of loft space and customer requirements the appropriate roof window type can be chosen for each room.

**The top hung and pivot window** functional design ensures comfort and ease of use. The outward opening function enables easy approach to the edge of the window and provides a wide view through the open sash. The pivot function enables the cleaning of the outer pane and operation the awning blind.

**Pivot windows** are popular types of roof

windows. Due to the user's comfort, ease of use and versatility they have found many buyers worldwide. There are several types of roof windows which differ in technical parameters and equipment so they can be used in different rooms in the loft space. Wooden windows are installed in a standard room in the loft space (bedroom, rooms for children or corridors). In places where there is elevated level of moisture (kitchens, bathrooms, laundries, drying rooms) special aluminium-plastic windows or white polyurethane may be used. For

buildings with particular emphasis on energy saving, windows with highly energy efficient glazing units are recommended, and for passive buildings there are special windows FTT Thermo U8. Roof window with increased resistance to burglary FTP Secure P2-V is recommended for installation in low roof pitches and multi-family buildings, which are especially vulnerable to burglary through the roof window.

**Windows with raised axis of rotation** are pivotally opened, but the axis of rotation is positioned above the middle height of the window, so even a tall person can walk up to the window edge. The lower part of the sash acts as the window with outward opening function and the top provides additional illumination.

**The window with raised axis of rotation and lower transom** has two sashes: the top sash with raised axis of rotation and the bottom non-opening sash with laminated safety glass.

**Balcony window** is a modern, large, two sash window. After opening the sashes, it creates a balcony in the attic.

**L-shaped windows** designed to be installed where the roof meets a vertical wall. They can be combined with roof windows of any design. This results in the amount of light entering the room and the field of view being greatly increased.

## TOP HUNG AND PIVOT WINDOWS **preSelect**

- A new generation of top hung and pivot windows with two separate opening functions of sash: top hung and pivot. Separate opening functions provide sash stability and increase safety. The outward opening function enables the sash to be opened in any position from 0 to 35 degrees enabling easy approach to the edge of the open windows, which increases the usable area and provides unlimited view to the outside. The pivot function enables the sash to be rotated through 180° and is used when cleaning the outer pane or operating an awning blind. Innovative hardware system guarantees the use of only one way of opening and complete stability of the sash in outward as well as in pivot opening function. Opening method can be switched using the preSelect sliding switch positioned in the middle of the frame accessible when the window is open.
- Comfort of operation when using the handle located at the bottom of the sash. Elegant handle is equipped with a two step micro-opening facility.
- Easy cleaning of the outer pane and setting the awning blind with the use of blocking sash bolt when rotated through 180 degrees.
- Available as standard with energy-saving glazing U3.
- Increased resistance to burglary - TopSafe system.
- A wide range of accessories.
- Suitable for roof pitches from 15 to 55 degrees, special version of windows from 15 to 85 degrees.

### FPP-V **preSelect**

- V40P** - Automatic air inlet V40P
- highest quality pine wood, glued in layers, vacuum impregnated
- wood painted twice with ecological acrylic lacquer in natural colour

### FPU-V **preSelect**

- V40P** - Automatic air inlet V40P
- highest quality pine wood, glued in layers, vacuum impregnated,
- with three coats of polyurethane varnish ideal for creating a durable and smooth finish in white on the frame surface. Designed for rooms with periodically elevated humidity levels (kitchens, bathrooms)

### PPP-V **preSelect**

- V35** - Efficient air inlet V35
- multi chamber white PVC profile with reinforced steel core. Also available in golden oak or pine veneer
- the material does not absorb moisture, the window is durable and resistant to corrosion. Designed for rooms where elevated humidity level stays for long time (bathrooms, laundry rooms)

## CENTRE PIVOT WINDOWS Z-WAVE CONTROLLED

- Pivot window with factory-fitted equipment (switchboard, motor and transformer) to enable it to remotely open, close and control accessories via the remote control. Equipped with a rain sensor that automatically closes the sash during the rain. It has contacts on the frame for easy fitting of the electrical accessories.

- Easy connection to the mains supply 230V.

- Comfortable operation by remote control window. By turning the handle 90° the sash is disconnected with the actuator.

- Automatic air inlet V40P.

- Standard equipped with energy saving glazing unit U3.

- Increased resistance to burglary - TopSafe system.

- Accessories in the electric version are additionally equipped in Z-Wave module.

- Suitable for roof pitches 15 to 90 degrees.

### FTP-V Electro Z-Wave

- the highest quality pine wood, glued in layers, vacuum impregnated

## CENTRE PIVOT WINDOW WITH INCREASED RESISTANCE TO BURGLARY **Secure**

- Window equipped with reinforcement structure provided by the topSafe system, a new system preventing removal of anti-burglary glass Class P2A and handle with a lock. Such a window no longer requires any additional safeguards, such as additional locks that hinder the use of windows.
- Easy and convenient operation as for any standard window by the use of handle situated at the bottom of the sash. Handle with lock has a two-stage micro-opening.
- Automatic air inlet V40P.
- Easy way of cleaning the outer pane and setting the awning blind with the use of blocking sash bolt when sash rotated through 180 degrees.
- Laminated and anti-burglary glass P2.
- The highest quality pine wood, glued in layers, vacuum impregnated.
- Double coated wood with ecological acrylic lacquer in natural colour
- A wide range of accessories.
- Suitable for roof pitches from 15 to 90 degrees.

### FTP-V P2 Secure

- Roof Window FTP-V P2 Secure holds the Dutch police quality certificate- "Live safely"
- Roof Window FTP-V P2 Secure is protected against different types of break-in attempts, such as:
  - hitting the top of the window
  - levering the handle with the use of tool
  - window glass removal
  - breaking glass

# FLASHINGS

Flashings are essential for the correct installation of window in the roof. Precisely designed flashing details ensure durable and neat fit with the roofing material used. The purpose of flashing is to ensure good drainage away of rainwater and melting snow from the window and to provide protection from the wind. In FAKRO product range there are many types of flashing solutions, which are made of aluminum sheet, protected by polyester lacquer. The basic colour is grey - brown RAL 7022, by which the window matches perfectly any standard roofing colour.

Standard flashings allow to install windows in the most popular types of roofing materials:

**ES\_**

for flat roof coverings up to 10mm thickness (2x5mm)

**EZ\_**

for profiled roof coverings (up to 45mm profile depth)

**EH\_**

for high profile roof coverings (up to 90mm profile depth)

**EHV-AT<sup>Thermo</sup>**

provides thermal insulation of roof windows above the surface of battens

**EL\_**

for slated roof coverings up to 10mm thickness (2x5mm)

**EG\_**

for slated roof coverings with thickness 24-32mm

**EFW**

flat roof system

## FLASHING FOR JOINING WINDOWS IN COMBINATIONS

Flashing systems are ready made flashing combinations for joining windows in the groups: horizontally, vertically, and in a block. The distance between the windows joined horizontally and vertically is normally 10cm. If external shutters are installed on windows installed vertically, a gap of at least 20cm is required. There are seven modules in the FAKRO combination system to cater for any layout you may require.

**B2/1**

## WINDOW WITH RAISED AXIS OF ROTATION

- The centre pivot window, but its axis of rotation is situated above the centre of the window so even a tall person can easily walk up to the window edge. The lower part of the sash fulfils a top hung window function and the upper part of the sash is an additional source of daylight. The sash when opened in position from 0 to 45 degrees is supported by innovative supporting mechanism enabling the sash to be open in any position within this range. The window when installed in roofs with pitches 39-43 degrees will satisfy the requirements of DIN 5034-1 standard\*, according to which the bottom window edge has to be situated 95cm above the floor level and the top minimum 220cm.
- The window is operated by the use of handle located at the bottom of the sash. The handle is equipped with a two step micro-opening facility.
- Automatic air inlet V40P
- Standard equipped with energy efficient glazing unit U3.
- The highest quality pine wood, glued in layers, vacuum impregnated.
- Double coated wood with ecological acrylic lacquer in natural colour
- Sash rotated through 160 degrees is locked by the bolt for cleaning.
- Increased resistance to burglary - TopSafe system.
- A wide range of accessories.

\* Rule applies to the German market

FYP-V proSky

- single sash window

- installation range 20-65°

FDY-V Duet proSky

- two sash window, lower non-opening sash with safe glass L3

- installation range 25-65°

## BALCONY WINDOW **Galeria**

- Innovative, large roof window in which the open sashes create a balcony. The upper sash is opened upwards, the lower forward allowing easy access to the balcony bay. The sash when opened in position from 0 ° to 45 ° is supported by innovative supporting mechanism enabling to leave the sash open in any position within this range.
- The window is operated by the handle located at the bottom of the upper sash. Handle with two-point locking mechanism.
- The sash when rotated through 180 degrees is locked by the bolt for cleaning.
- Automatic air inlet V40P.
- Both the upper and lower sashes are equipped with safety glazing unit P2.
- The highest quality pine wood, glued in layers, vacuum impregnated.
- Double coated wood with ecological acrylic lacquer in natural colour.
- Increased resistance to burglary - TopSafe system.
- A wide range of accessories.
- Installation range from 35 to 55 degrees.

## FGH-V **Galeria**

- the upper sash can be raised smoothly up to an angle of 45 °. Side safety barriers are integrated into the bottom sash and they tilt forward during the sash opening
- when closing the lower sash, the balcony barriers are hidden below the window profiles and are not visible above the roof, so do not get dirty and do not spoil aesthetics of the roof.

Installation of balcony window can only be performed by qualified personnel. Cost of installation services is determined individually.

FGH-V balcony window in combination with other FAKRO windows e.g. FDY-V can be realised only by means of K\_\_\_/G flashing.

## L-SHAPE COMBINATION WINDOW

**L3**

**P5**

**15-55°**

- The L-shaped windows are designed to be installed where the roof meets a vertical wall. These windows serve to extend the roof window into the wall. This results in the amount of light entering the room and the field of view being greatly increased. The L-shaped combination windows can be combined with roof windows of any design.
- Standard equipped with safety glazing unit L3 or P5.
- Windows equipped with multi-point locking fittings.
- The highest quality pine wood, glued in layers, vacuum impregnated.
- Double coated wood with ecological acrylic lacquer.
- A wide range of accessories.
- The roof window installation range joined with L-shaped combination window is 15 to 55 degrees.

**BD\_**

- tilt and turn opening system.
- The sash opened by tilting 12cm and turned to 90 degrees. Operated by one handle located on the side of the sash. As standard comes with a key, by which you can lock the window. Opened to the right (BDR) or left side (BDL).

**BVP**

- tilt opening
- The sash opened by tilting about 12 cm. The handle with key lock is situated on the upper part of the sash.

**BXP**

- non-opening

L-shaped combination flashing is selected on the basis of the roof windows size.

## ROOF WINDOW ACCESSORIES

Roof window accessories combine functionality and utility features with an attractive decorative form. Make it possible to control the action of light, reducing heat excess in the summer and save energy in winter. A wide range of types, patterns and colours of accessories ensures that the window matches with any interior décor and offers the possibility of shaping the style of any room.

## ROOF WINDOW ACCESSORIES

### INTERNAL ACCESSORIES

Venetian blind  
**AJP**

- ability to control the amount of incoming light to the room
- control the direction of light entering through by changing the angle of lamellae

roller blind standard  
**ARS**

- protection from light
- can leave the blind in three different positions

dimming roller blinds  
**ARP**

- protection against sunlight during sunny days
- possibility to lock the blind in any position

blackout blinds  
**ARF SUNSET**

- very good protection from sunlight
- the possibility of darkening the room
- possibility to lock the blind in any position
- partial protection from solar heat

pleated blinds  
**APS**

- provide a soft and diffused light into the room
- possibility to lock the blind in any position

Insect screen  
**AMS**

- protection against insects
- minimum shading of the room
- can be installed with other internal and external accessories

AMONG THE EXTERNAL ACCESSORIES WHICH SERVE AS A PROTECTION AGAINST HEATING OF THE ROOM THERE ARE:

### EXTERNAL ACCESSORIES

awning blind  
**AMZ**

- 8 times more efficient against room overheating
- optimal protection against burdensome heat (effect - price)
- effective shading of the interior while providing visibility
- comfortable use, the awning blind can cover the window for a whole summer without the need to roll it up and down every day

**8 times**  
more  
effective

external roller shutter  
**ARZ**

- effective protection against burdensome heat
- reducing heat loss in winter
- darkening the room
- makes break-in attempts difficult

## WINDOW CONTROL ACCESSORIES

### ZST

- Universal telescopic rod for windows, shutters and blinds installed beyond the immediate reach of the user

### ZBB

- product that allows secure, limited window opening. Thanks to the application of the restrictor, it is possible to leave the window ajar tilted by approximately 10cm,

### ZBL

- attractive white window lock prevents accidental opening of the window. It is installed in the bottom part of the window.

### ZWS 12

- actuator to control the windows - 12VDC (control device and switched mode power supply have to be bought additionally)\*

## ELECTRICAL CONTROLS Z-WAVE

### ZWK 10

- wall controller to control many of the products separately or simultaneously

### ZWP 10

- remote control to control multiple receivers separately or simultaneously

### ZZ60

- switched mode power supply 12VDC to power electrical devices. Provides power for up to three electrical accessories

\*more information available in Electric Control 2011 catalogue

## INSTALLATION ACCESSORIES

FAKRO installation accessories guarantee quick and easy connection between the roof window and the roof construction.

Using XDP insulating set and XDS air-tight flashing ensures the complete protection of a fitted roof window. The installation accessories reduce the risk of thermal bridging and guarantee the proper draining of any moisture around the FAKRO window.

Using original installation accessories will allow the proper use of the windows for many years.

### XLW Lining

- is designed to ensure quick finish around the window from the inside of the room.
- proper finish of the lining, the bottom part vertical and the top horizontal ensures good light access and guarantees proper air circulation over the surface of the glass. The XLW-F lining is designed to be installed solely with wooden windows, whereas XLW-P with aluminium clad plastic windows.

XDP insulation kit with XDS air-tight flashing constitute XDK insulation flashing set

### XDP Insulation set

- is designed to enable fast and tight installation of thermal and air-permeable insulation around the window. The set consists of air-permeable membrane and thermo-insulation material made of natural wool in shape of wool cubes and wool tress. The thermo-insulating material is made of specially impregnated sheep wool. Its high elasticity enables ideal adjustment of the material to the space it fills. Universal way of insulating enables roof window insulation irrespective of the roof opening size. Air-permeable collar connects window with roof membrane and protects thermo-insulating material from moisture.

- XDP insulation kit with XDS air-tight flashing constitute XDK insulation flashing set

### XDS air tight collar

- is used to form air-impermeable barrier around the roof window. This ensures tight connection of the film with roof window. The film is installed in the groove specially made in the window's frame ready for installation of the lining. Air tight collar is installed from the inside of the room as a barrier against warm, humid air, as any moisture on the surface of the insulation greatly reduces its thermal insulation properties.

# ROOF ACCESS WINDOWS

Roof access windows provide fast, easy and safe access to the roof for conservation, installation or maintenance. Depending on the type of room in the loft space, proper roof access window can be installed.

FW\_

WS\_  
WG\_  
WLI

## ESCAPE WINDOW FW

Escape window FW combines advantages of roof window and roof access window. As a roof access window provides easy and safe access to the roof and as a roof window it lets sunlight and fresh air enter the space.

The FW escape window also has good thermal insulation properties.

## STANDARD ACCESS ROOF LIGHTS

The main function of standard access roof lights is to enable access to the roof. They provide lighting and fresh air which thanks to the possibility to leave the sash ajar enters the space inside.

### FW\_

- is designed for inhabited, heated and insulated attics. There is a version of opening to the right or left side

### WS\_

- top hung design, semi-circular made from polycarbonate dome opens upwards through 180 degrees, providing easy access to the roof, and the effective lighting of the room.
- The material from which it is made is characterised by increased resistance to weathering and UV rays' penetration.

### WG\_

- top hung design, the sash opens upwards.
- is available in two versions:
- WGT version with single toughened glass 4H,
- WGI version with integrated toughened glass 4H-10-4H

### WLI

- top hung design with sash which opens on side. It can be installed in such a way as to be opened to the right or the left. The applied turn limiter holds the sash stable when opened and prevents it slamming shut accidentally.

**FSP P1**

## SMOKE VENTILATION WINDOW FSP P1

Window is a part of gravitational smoke ventilation system and is used to expel the excess of smoke and heat during the fire. Additionally, the system enables daily ventilation and allows light into the room. The window is equipped with two electric motors, which open the window sash after a electric signal from the control unit. The open window protects the roof opening against the lateral wind. The window is installed in such a way that all the window edges are below the roof ridge level. The smoke ventilation window has been manufactured and certified according to harmonised standard EN 12101-2:2005. This window is usually applied in stairways.

### FSP

#### Features

- manufactured according to EN 12101-2:RE1000(+1000), SL500, WL1500, T(00), B300;
- maximum sash opening pitch 75° in 51 seconds, when fully loaded;
- suitable for roofs with pitches between 20° and 60° with special flashing E\_S;
- made of wood, vacuum impregnated with two coats of acrylic lacquer;

## OTHER PRODUCTS

### Solar Panels

FAKRO solar panels can be installed either independently or together with FAKRO roof windows in visually appealing combinations using standard flashings. Solar panels are becoming increasingly popular as an eco-friendly way of harnessing the sun's energy to heat water.

Typical system consists of: SKW-solar panel, solar cylinder, expansion tank, solar pump with controller, glycol, mixing valve, connecting set, panel connecting set

**Note: Possible installation range for SKW 15° – 90°, SKC 30° – 90°**

## Light Tunnels

In order to supply interior with natural light where there are no opportunities to install roof or vertical windows, an effective solution can be a light tunnel. Thanks to the light tunnel, the natural light gets into the building illuminating its interior. Dimly lit interiors without access to the natural light can become light and comfortable to use.

There are two types of light tunnels available: SRT with rigid light transmitting tube and SLT with flexible light transmitting tube. Flashings enable installation of light tunnels in nearly every roof covering and even in flat roofs.

### Sizes of Light Tunnels
